

Ayushman Gupta

DevOps & Cloud Infrastructure Engineer · DevSecOps

+91-8210115793 | ayushmanng04@gmail.com | github.com/xyushman | linkedin.com/ayushman-gupta04

SUMMARY

- Software Intern at **IIT Bombay (FOSSEE)** with proven expertise in cloud infrastructure automation (**AWS, Terraform, Ansible**), end-to-end **CI/CD pipelines**, and **DevSecOps** tooling (Jenkins, EKS, Trivy, SonarQube, OWASP).
- Built a nationally recognised **DevSecOps security platform** placing **Top 100 / 30,000+ participants** at the AMD Slingshot Hackathon, plus a production-grade end-to-end secure CI/CD pipeline deploying to **Amazon EKS** with automated image scanning, static analysis, and real-time observability.
- Disciplined problem-solver with **600+ competitive programming solutions** (Codeforces max 1105, CodeChef max 1258) and a **CGPA of 8.7/10**.

EDUCATION

B.Tech in Artificial Intelligence | VIT Bhopal University

Sep 2023 – May 2027

CGPA: **8.7 / 10** · Coursework: Operating Systems · Computer Networks · System Design · Databases

EXPERIENCE

Software Engineering Intern | Osdag / FOSSEE · IIT Bombay (Remote)

Feb 2026 – May 2026

- Accelerated feature delivery by migrating a **legacy desktop GUI** to a modular **React + Vite + Bootstrap** web architecture, maintaining **100% feature parity** across all migrated modules under Git / GitHub version control.
- Cut average defect-resolution time by systematically profiling bottlenecks and implementing performance fixes, enabling **faster, more reliable release cycles** in a cross-functional engineering team.

PROJECTS

StackBucks — End-to-End DevSecOps CI/CD Pipeline

[\[GitHub\]](#)

- Eliminated manual deployment risk by building a **full Jenkins CI/CD pipeline** that containerises a Next.js app with **Docker** and deploys to **Amazon EKS**, reducing deployment to a **single automated trigger** via Jenkinsfile-driven GitOps.
- Hardened the pipeline with **Trivy image scanning**, **SonarQube SAST**, and **OWASP dependency checks** at every stage, then surfaced cluster health through **Prometheus + Grafana** dashboards for real-time observability — implementing a **shift-left security** approach across the full SDLC.

Distributed Inference System — Alchemyst AI

[\[GitHub\]](#)

- Reduced **infrastructure provisioning time to near-zero** by authoring **Terraform IaC** for a complete AWS environment (VPC, public/private subnets, NAT gateway, security groups, Elastic IP) with **Ansible inventory auto-generated** from Terraform outputs, eliminating all manual click-ops.
- Achieved **reliable distributed RPC inference** across multiple EC2 instances through **Ansible playbooks** for end-to-end configuration management, removing manual server setup and enforcing **idempotent provisioning**.

Zenith — AI-Powered Developer Security Platform [\[GitHub\]](#) ★ Top 100 / 30,000+ — AMD Slingshot Hackathon

- Prevented secret leakage at commit time by building a **real-time VS Code extension** (TypeScript) that performs **inline SAST** detection of hardcoded API keys and credentials as the developer types — with zero build-step overhead.
- Reduced manual security audit time to a **single CLI command** by implementing a **Python Click + Rich** tool that produces colour-coded vulnerability reports, enabling plug-and-play **CI/CD pipeline integration**.

AWS Multi-AZ Load-Balanced Web Application

[\[GitHub\]](#)

- Achieved **high availability** for a cloud-native web application by provisioning a **multi-AZ AWS environment** (VPC, public subnets, EC2, ALB) entirely via **Terraform IaC**, eliminating manual infrastructure management.
- Enforced **least-privilege cloud security** by configuring granular **IAM roles** and automating Apache server provisioning via **Bash user-data scripts**, applying AWS governance and Linux sysadmin best practices.

TECHNICAL SKILLS

Cloud & IaC	AWS (EC2, VPC, S3, IAM, ECS, EKS, Lambda, API Gateway, DynamoDB, RDS, CloudFormation, ALB, NAT Gateway) · Terraform · Ansible
Containers	Docker · Kubernetes · Amazon EKS · container orchestration · cloud-native deployment · ECR
GitOps	Argo CD · GitOps workflows · declarative deployments · automated Kubernetes deployments
CI/CD & DevOps	Jenkins (Jenkinsfile/Groovy) · GitHub Actions · Git · Vagrant · automated provisioning · configuration management
DevSecOps & Security	Trivy · SonarQube · OWASP · SAST · DAST · shift-left security · secrets detection · image scanning
Monitoring	Prometheus · Grafana · observability · alerting · cluster monitoring
Languages	Python · Bash · Groovy · C++ · Java · JavaScript · TypeScript · Node.js
Systems & Databases	Linux · Windows Server · Computer Networks · System Design · MongoDB · MySQL

CERTIFICATIONS

- **AWS Ultimate Bootcamp** — School of DevOps
- **Oracle Cloud Infrastructure Foundations Associate** — Oracle
- **NPTEL Cloud Computing** — NPTEL / IIT
- **Supervised Machine Learning: Regression & Classification** — Stanford University · Coursera

ACHIEVEMENTS

- **AMD Slingshot Hackathon** — Ranked **Top 100 nationally** out of **3,000+ teams** and **30,000+ participants** for building Zenith, an AI-powered local DevSecOps platform with real-time secret detection and vulnerability reporting.
- **Competitive Programming** — **600+ problems** solved across Codeforces (**max rating 1105**), CodeChef (**max 1258**), LeetCode, and GeeksforGeeks in C++, Python, and Java.
